

4. Mains Method

- Cut the Power Lead, dispose of plug
- Connect the exposed + and - wires to a Terminal Connector
- Connect a Transformer / Driver to the Terminal Connector
- Wire the Transformer into the Mains
- Your LightBars are now ready to use
- Your LightBars may be connected together using the Daisy Chain Method, the Connector Method or the Adaptor Method
(See previous instructions for these methods of connection)

NB. Once Mains Wired a combination of methods to connect LightBars together can be used. (See previous instruction sheet).
